

Budget Proposal

Presented by: **DispExcript**

Ingredients

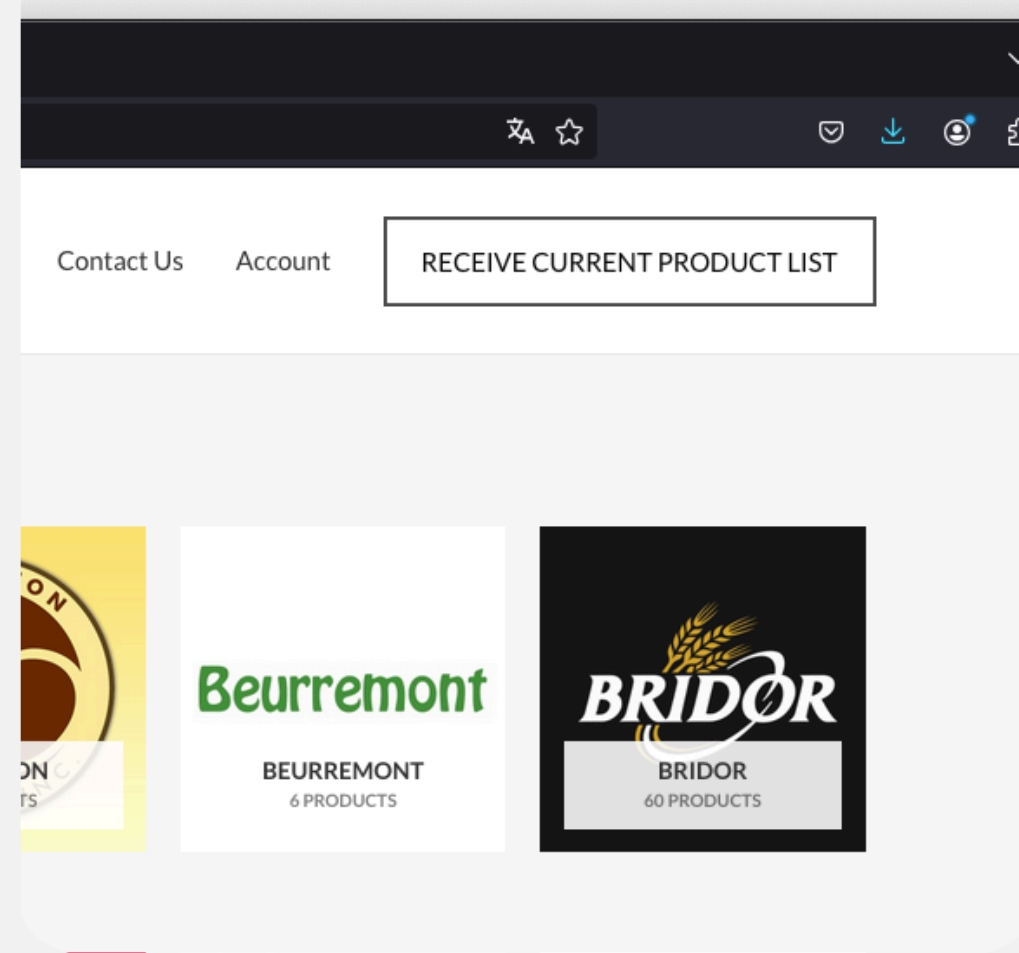

planning

- Add a shopping cart
- Add a payment gateway
- Edit the approximately 380 products (add price and functionality to the shopping cart)

breakdown of the activities to
be carried out

shopping cart

add shopping cart to
navigation bar

An icon is usually added that redirects
to the cart

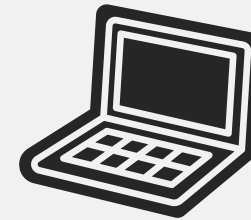

create the shopping cart
page where the
products that have been
added are displayed

Add a payment gateway

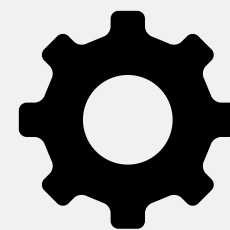

The payment gateway is made up of a form where the user's data and the payment method are added.

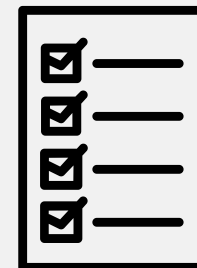

create payment page

create the form to collect user data

configure payment methods

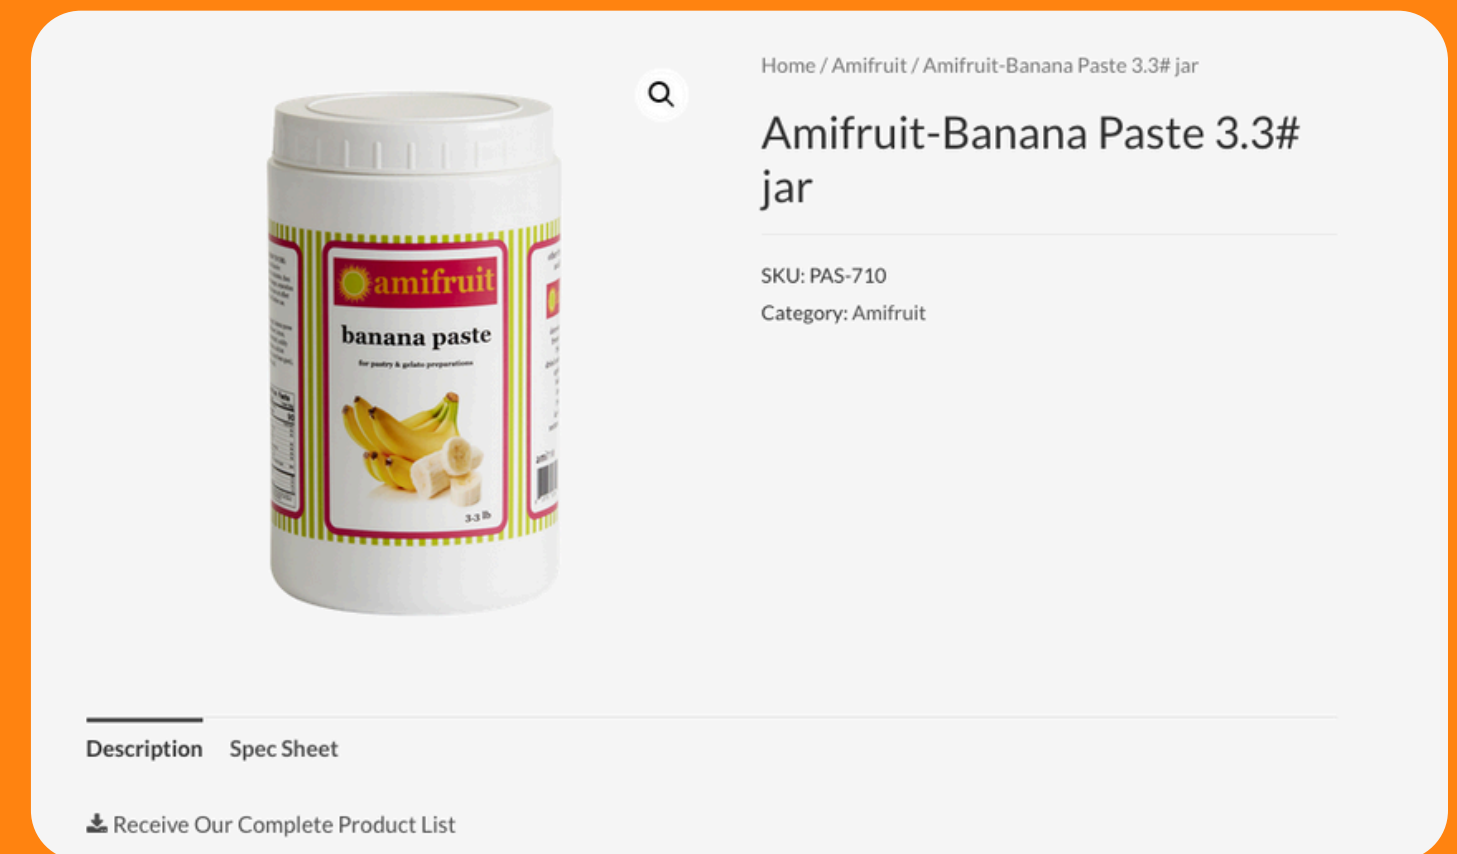

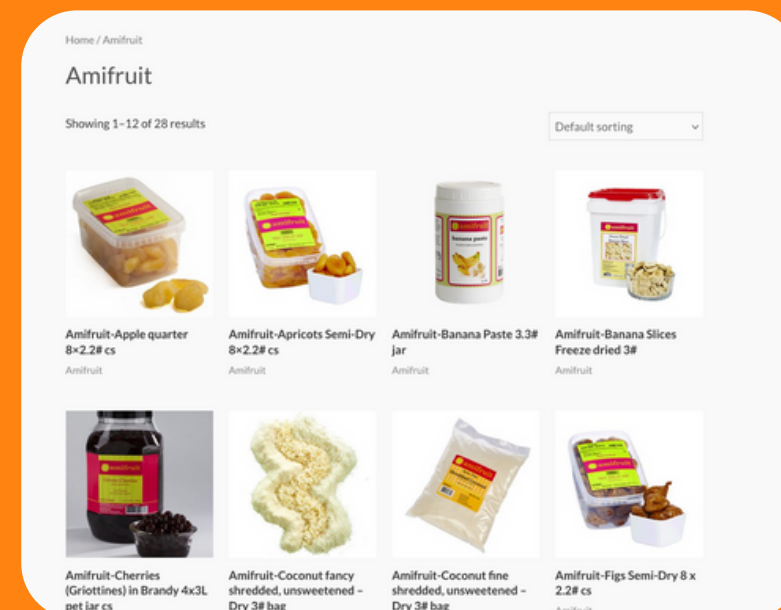

perform functional tests

modification of existing products

The elements necessary for the functioning of the shopping cart will be added

- This page should show the price of the product
- add to cart button

Time required

shopping cart,
payment gateway

They require more actions, making their implementation more complex, but they are in less quantity.

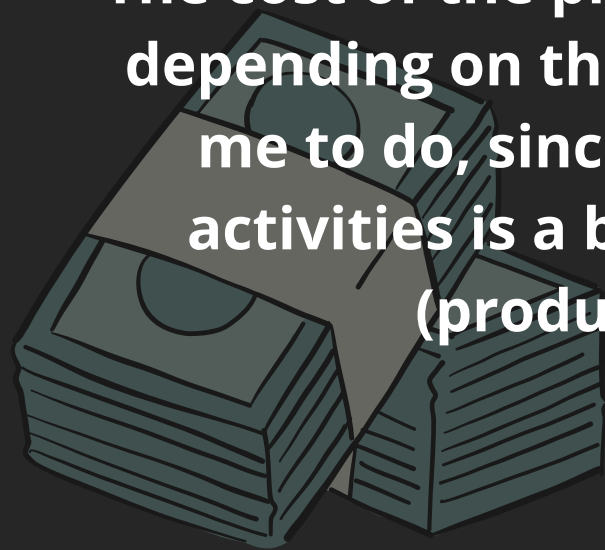

modify existing
products

It is an easier task, but there are a greater number of actions to perform

Therefore, it is difficult to put an exact completion time, but it could be a few days.

quote on the project

The cost of the project may vary depending on the days it takes me to do, since one of the activities is a bit extensive (products).

Budget summary

Shopping Cart

- add shopping cart to navigation bar
- create the shopping cart page where the products that have been added are displayed

Add a payment gateway

- create payment page
- create the form to collect user data
- configure payment methods
- perform functional tests

Modification of existing products (380)

- price of the product
- cart button

project cost: **\$200 - \$350**
